Art Unit: 2665

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1, 26 and 42 are rejected under 35 U.S.C. 102(a) as being anticipated by Figure 10 of the instant application which is admitted by the applicant as prior art.

Regarding claims 1, 26 and 42, by taking the steps 1003-1005 of prior art Figure 10 as the steps 401-403 of claimed invention as in Figure 4, the description of admitted prior art Figure 10 discloses an apparatus, a method and a computer readable memory storing a control program having a data link layer which executes data transfer on a logical channel for controlling packet transfer conducted by a plurality of logical channels, by recording information regarding the order of packet transfer by each logical channel in a descriptor, and executing, by the data link layer, transfer by each logical channel based on the order of transfer by each logical channel designated by the descriptor (see page 4, lines 13-23) as claimed.

4. Claims 2-25, 27-41, 43-47 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2665

Goldstein et al., Nakatani et al., Osborne et al., Daniel et al., Doidge et al. and Marshall are all cited to show the common feature of data packet transfer among nodes in communication network utilizing the descriptors for signaling purpose similar to the claimed invention.
